Automobile Antenna is an electrical component which is designed to be mounted on the vehicle refers to receive and transfer information. Typically an antenna consists of an arrangement of metallic conductors (elements), electrically connected (often through a transmission line) to the receiver or transmitter. An oscillating current of electrons forced through the antenna by a transmitter will create an oscillating magnetic field around the antenna elements, while the charge of the electrons also creates an oscillating electric field along the elements. These time-varying fields radiate away from the antenna into space as a moving transverse electromagnetic field wave. Conversely, during reception, the oscillating electric and magnetic fields of an incoming radio wave exert force on the electrons in the antenna elements, causing them to move back and forth, creating oscillating currents in the antenna.

Europe is the largest Automobile Antenna market with about 31% market share. North America is follower, accounting for about 20% market share.

The key players are Kathrein, Harada, Laird, Yokowa, Northeast Industries, Hirschmann, Suzhong, Ace Tech, Fiamm, Tuko, Inzi Controls, Shenglu, Riof, Shien, Tianye etc. Top 3 companies occupied about 47% market share.
