An automobile backup camera module is a technology installed in vehicles to provide drivers with a clear and real-time view of the rear area while reversing. It typically consists of a camera that is mounted on the rear of the vehicle and a display screen positioned within the driver's view. When the vehicle shifts into reverse gear, the camera captures the scene behind and transmits the images to the display screen, allowing the driver to visually assess obstacles, pedestrians, or vehicles that may be in their blind spot. This module enhances safety, improves maneuverability, and reduces the risk of accidents during parking and maneuvering in tight spaces.
