An automobile brake booster pump, also known as a brake vacuum pump, is a component in a vehicle's braking system that assists in enhancing brake performance. It is commonly found in vehicles with vacuum-assisted power brakes. The brake booster pump generates a vacuum that provides additional pressure to the brake system, aiding in the efficient application and modulation of braking force. By increasing the vacuum, the pump ensures consistent braking performance regardless of engine speed or load conditions. This contributes to improved safety and control during braking, especially in situations where strong and reliable braking is necessary.
