The global Automobile Cold Drawn Welded Tube market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Cold Drawn Welded Tube is made by cold drawing process using ERW tube as raw material. After welding, the whole tube body is normalized to ensure the homogeneity of weld and heat affected zone with the rest of the tube in metallographic structure and mechanical properties; cold drawing and subsequent heat treatment (eliminating internal stress) give the steel tube good dimensional and mechanical properties. Cold drawn welded pipes are widely used in automotive applications and other special machinery, mainly in automotive applications, mainly including fuel tanks, propeller shafts, transmission shafts, etc.
