Compression spring is a widely used spring component that can be used in various application scenarios for controlling motion or shock absorption energy storage. The material is abundant, the structure is simple, the end face can be ground flat for stress stability, the surface can be shot blasted to increase fatigue life, and can store stress to meet the requirements of attenuation resistance. Accurate spring stiffness and stress calculation make the cost more optimized, and intelligent automated production control ensures that quality requirements are met. Compressed springs are commonly used in the following applications: automotive suspension system springs, automotive clutch damping springs, automotive electric tailgate springs, injection system (pump and injector) springs, shock absorbers, braking systems (ABS, ESP, brake actuators), transmission control, belt and chain tensioning systems, and oil pumps. Air conditioning compressor return spring, switch sensor spring, precision electronic sound sensor spring, etc.

United States market for Automobile Compression Spring is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
