The global Automobile Drive Motor Rotor market size is predicted to grow from US\$ 12320 million in 2025 to US\$ 20080 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

In 2024, global sales of automotive drive motor rotors reached 280 million units, with an average selling price of \$42 per unit. Automotive drive motor rotors are the core rotating components of electric drive systems, primarily composed of a laminated silicon steel core, a shaft, conductive copper, and permanent magnets. They directly determine motor efficiency and torque performance. Upstream raw materials include high-grade silicon steel sheets, NdFeB permanent magnets, copper rods, and high-strength steel. Suppliers include Baowu Steel, Nippon Steel, Baotou Steel Rare Earth, and Ningbo Yunsheng. Midstream manufacturers include Jingjin Electric, BYD Fudi Power, Broad-Ocean Motor, and Bosch. Downstream customers include automakers and electric drive system manufacturers, including Tesla, Volkswagen, Toyota, BYD, and CATL. Global production capacity is approximately 360 million units per year, with leading manufacturers boasting single-line production capacity of 2.5 million to 3 million units per year. Future development directions include high power density design, the application of low rare earth or rare earth-free rotor materials, lightweight and modular manufacturing, and integrated collaboration with electronic control systems to further improve the energy efficiency and cost competitiveness of the vehicle.

The automotive drive motor rotor market is experiencing rapid expansion, driven primarily by the continued rise in new energy vehicle penetration and the increasing demand from OEMs for optimized electric drive efficiency. From a technological perspective, the combination of high-performance silicon steel laminations and high-energy-product rare earth permanent magnets is driving rotor evolution towards higher

speeds, lighter weight, and lower energy consumption. Simultaneously, research and development is accelerating for solutions that eliminate or reduce the use of rare earths to address raw material price fluctuations and supply chain security. From an industrial perspective, China leads in production capacity and cost control, while European, American, and Japanese manufacturers maintain their market share in the high-end market by leveraging process precision and patent portfolios. With the trend toward intelligent electric drives and integration, the coordinated optimization of rotors, stators, and electronic control modules will become a key focus of industrial upgrading. The market is expected to polarize in the future: high-end, high-efficiency rotors meeting the needs of high-performance electric vehicles, and cost-effective, standardized rotors catering to mass-market models. Competition among companies will focus on material innovation, production automation, and the deployment of large-scale production capacity.
