The automotive generator rectifier is a device that converts alternating current (AC) into direct current (DC). It is usually used in conjunction with a generator to ensure that the vehicle battery and electrical system receive a stable DC power supply. The AC power generated by the generator is rectified by the diodes or transistors in the rectifier and then provided to charge the battery or power other electronic devices, thereby ensuring the normal operation of the vehicle's electrical system. The role of the rectifier is crucial, especially in ensuring the stability of the vehicle battery charging and power supply.
