Automotive-grade IC refers to integrated circuits (Integrated Circuits, ICs) that comply with the specifications and standards of the automotive industry. These ICs are specifically designed for use in automotive electronic systems and therefore need to meet stringent safety, reliability and environmental suitability requirements. The automotive industry's needs for integrated circuits are very different from general consumer electronics. Automotive electronic systems need to be able to operate reliably under environmental conditions such as extreme temperatures, humidity, and vibration, and to have higher safety and stability. Therefore, automotive-grade ICs need to consider these factors during the design and production process, and are usually subject to more stringent testing and certification.

The global Automobile Grade IC market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
