According to our LPI (LP Information) latest study, the global Automobile Low-Frequency Sound-Absorbing Insulation market size was valued at US\$ million in 2023. With growing demand in downstream market, the Automobile Low-Frequency Sound-Absorbing Insulation is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Automobile Low-Frequency Sound-Absorbing Insulation market. Automobile Low-Frequency Sound-Absorbing Insulation are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Automobile Low-Frequency Sound-Absorbing Insulation. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Automobile Low-Frequency Sound-Absorbing Insulation market.

In order to reduce the noise pollution, many nations have started implementing new regulations, which results in high demand for low-frequency sound-absorbing insulation materials to lower noise level in vehicles. For instance, in 2014, the European Union adopted new regulations to reduce the noise produced by passenger cars, light commercial vehicles, buses, light trucks, coaches, and trucks. For passenger cars, buses, and light trucks, the limit values will be lowered in two steps of 2 decibel A-weighting (dB[A]) each. For heavy-duty vehicles, the reduction will be 1 dB(A) for the first step and 2 dB(A) for the second step.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
