An automobile profile extrusion die is a specialized tooling component used to produce continuous, shaped profiles—typically made of aluminum or thermoplastics—for automotive applications. These profiles may be used for window guides, trim strips, roof rails, sealing channels, crash absorption structures, or interior decorative elements. The die defines the exact cross-sectional shape of the extruded material, ensuring dimensional accuracy, strength, and aesthetic appeal.

Made from high-performance tool steel (like H13 or SKD61) and often surface-treated for durability, these dies must withstand high temperatures and pressures while maintaining tight tolerances. In automotive applications, profile dies are often complex, incorporating multi-cavity outputs or co-extrusion channels for bonding different materials (e.g., metal with rubber or plastic). High precision in die design ensures compatibility with downstream forming, bending, or cutting processes.

United States market for Automobile Profile Extrusion Die is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
