The car access control system is a system that integrates electronic control and security technologies, designed to manage and control the vehicle's door lock and unlock functions to improve the vehicle's safety and convenience. When the owner approaches the vehicle with a smart key, the access control system detects the presence of the key through the antenna module, and the ECU verifies the key's signal. If the verification passes, the system automatically unlocks the door. The owner can enter the vehicle without using a traditional mechanical key. This keyless entry technology greatly improves user convenience.
