Automotive Active Aerodynamic Devices are components on a vehicle that automatically adjust their shape, position, or function in real-time to optimize aerodynamic performance based on driving conditions. Unlike passive aerodynamic parts, these active devices respond dynamically to factors such as speed, braking, steering input, and engine temperature. Common examples include active grille shutters that open or close to manage airflow and engine cooling, active rear spoilers that deploy to increase downforce at high speeds, and adjustable ride height systems that lower the vehicle to reduce drag. These technologies improve fuel efficiency, vehicle stability, and handling, and are increasingly used in performance vehicles, electric cars, and luxury models.

United States market for Automotive Active Aerodynamic Devices is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Automotive Active Aerodynamic Devices is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
