According to this study, the global Automotive Active Noise Control market size will reach US$ 1142 million by 2031.

Automotive Active Noise Control (ANC) is a technology used in vehicles to reduce unwanted cabin noise by generating sound waves that are out of phase with the noise, effectively canceling it out. Using microphones, sensors, and digital signal processors, the system detects engine, road, or wind noise and emits anti-noise through the car's speakers to neutralize it in real time. This enhances passenger comfort and allows automakers to use lighter, less bulky sound insulation materials, improving fuel efficiency. ANC is commonly found in luxury and electric vehicles, where quietness is a key aspect of the driving experience.

United States market for Automotive Active Noise Control is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Automotive Active Noise Control is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Automotive Active Noise Control is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
