## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Adaptive fog lights involve the incorporation of a swiveling reflector with normal fog lamps. When a turn signal is activated, or a large steering angle is detected, the fog lamp that corresponds to the in-side wheel is automatically switched on, and the reflector swivels inside the fog lamp to orient the light to the side of the vehicle where the wheels are turning. The market encompasses the sales of passenger cars that incorporate adaptive fog lights. Some of the luxury passenger cars use this system.
