The electric compressor of automobile air conditioning is driven by motor, which is the heart of the refrigeration system of automobile air conditioning and plays the role of compressing and transporting refrigerant steam. The scroll compressor is composed of an end plate and involute scroll teeth extending from the end plate. It has many advantages. For example, the compressor is small in size and light in weight, and the eccentric shaft driving the moving turbine can rotate at a high speed. Because the scroll compressor can operate reliably without the suction valve and the exhaust valve, and it is easy to realize variable speed movement and variable displacement technology.

Multiple compression chambers work simultaneously and the gas pressure difference between adjacent compression chambers is small so that the gas leakage is small.

Global major players in global automotive air-conditioning electric compressor market include Hanon Systems, DENSO, etc. The top two players occupy about 60% shares of the global market. The global automotive air-conditioning electric compressor are mainly produced in Japan and South Korea, they occupied for a share over 70%. China is the largest market, has a share about 48%, followed by Japan and Europe, with share 23% and 16%, separately.
