The global Automotive Air Conditioning Electric Scroll Compressors market size is predicted to grow from US\$ 1862 million in 2025 to US\$ 2571 million in 2031; it is expected to grow at a CAGR of 5.5% from 2025 to 2031.

The automobile air-conditioning compressor is the heart of the automobile air-conditioning refrigeration system, which plays a role in compressing and transporting refrigerant vapor. The scroll compressor is composed of an end plate and involute scroll teeth extending from the end plate. It has many advantages. For example, the compressor is small in size and light in weight, and the eccentric shaft driving the moving turbine can rotate at a high speed. Because the scroll compressor can operate reliably without the suction valve and the exhaust valve, and it is easy to realize variable speed movement and variable displacement technology. Multiple compression chambers work simultaneously and the gas pressure difference between adjacent compression chambers is small so that the gas leakage is small.

Global key players of automotive air conditioning electric scroll compressors include DENSO, Hanon Systems, Sanden, etc. The top three players hold a share about 70%. Asia-Pacific is the largest market, has a share about 63%, followed by Europe and Americas, with share 21% and 14%, separately.
