The Automotive Air Door Actuator functions by receiving commands from the vehicle's Electronic Control Unit (ECU) to adjust the position and angle of internal air vents. This controls the direction and temperature of airflow within the cabin. Through precise actuator control, the system enables air mixing, cooling, heating, and defrosting functions, delivering a personalized and zoned climate experience for occupants. In modern vehicles, multi-zone climate systems utilize several actuators to coordinate airflow separately for front and rear compartments, ensuring more accurate climate regulation.
