Earlier, automotive air filter in automobile were not such very efficient and were made of metal owing to which their costs were high and also takes time for cleaning. As with the evolution of technology, the improved air filter now performed better and material was replaced by plastics that lead to cost reduction. The automotive air filter has three basic components such as clean side cover housing, dirty side case housing and filter.

Despite the limitations of the space-saving, modern engines are designed to provide high efficiencies with good performance. Air-intake system plays an important role for an engine to perform efficiently by providing the clean air. For that purpose, automotive air filter housing are used to eliminate the impurities in the air which reaches to the cylinders and then to engine.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and

North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
