Air filters improve horsepower and mileage of an automotive. They also improve air flow to the engine and emission control system, enabling proper ignition of fuel. The production of air filters has gained momentum because of the high aftermarket demand, as they need to be changed at regular intervals. There are two types of automotive air filters: cabin type and intake air filters.

The global Automotive Air Filters market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

One of the primary drivers for this market is the exponential increase in the emission of greenhouse gases. It has been observed that a majority of premature deaths of people is mainly attributed to the long-term exposure to particulate engine emissions like nitrogen dioxide, carbon monoxide, sulfur dioxide, and hydrocarbons. Consequently, government bodies worldwide have formulated vehicular emission norms for checking the particulate emissions. For instance, the Euro emission standards formulated by the European Union, Corporate Average Fuel Economy (CAF?) standards formulated by the US, and the Japanese new long-term emission standards are some of the existing emission standards being implemented. Moreover, the US, European Union countries, and China are focusing on going green by reducing the carbon emissions significantly. This will result in a reduction of carbon emissions, which in turn, will propel growth in the global automotive air filter market during the forecast period.
