The electronic control unit (ECU) in automobiles (also referred to as the brain of a vehicle) refers to an embedded system that monitors and controls more than one electrical component or system present in a vehicle. The ECU receives input data from automotive sensors. With the growth in the percentage of electrification of vehicles, the number of sensors used has increased considerably. There has been a simultaneous increase in the number of ECUs installed in vehicles. A modern vehicle, of late, is equipped with about 70 ECUs.

Adaption of crash sound sensors in airbags is one of the key trends contributing towards the growth of the automotive airbag ECU market. The belt tensioners should be made in such a way that they activate immediately during a major accident but not meant to be activated during minor collisions. Sound crash sensors detect the severity of a crash acoustically and classify a crash according to its severity based on the intensity of the sound produced. Sound crash sensors are expected to witness high demand in the automotive airbag sensor market due its capability to categorize the intensity of the sound produced.
