An automotive alternator is used in advanced automobiles to charge the battery and supply power to the vehicle's electrical system when the engine runs. The most popular misunderstanding is that the battery powers every electrical device in the car, including

the windscreen wipers, headlights, and radio. Most of the electricity in a car is actually generated by an alternator.

The battery's principal functions are to start the engine and further provide power when it isn't running. On the other hand, a starter motor turns the engine through the ignition and permits the rest of the process. Starter motors are ultimately used to protect the motor from overload and short circuit faults and to reduce the starting current while maintaining the motor's starting speed.
