The global Automotive Aluminum Forging Control Arm market size is predicted to grow from US\$ 2733 million in 2025 to US\$ 3713 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

Aluminum forging is a manufacturing process that involves shaping a metal by heating it to a high temperature and then pressing it into the desired shape using a die. Forged aluminum control arms are made using this process and are known for their strength, durability, and lightweight properties. Aluminum is an excellent material for control arms because of its strength-to-weight ratio. It is much lighter than steel, yet it is strong enough to handle the forces exerted by the suspension system. Forged aluminum control arms are even stronger and more durable than regular aluminum control arms, making them an excellent choice for high-performance vehicles.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
