In the automobile industry, aramid fiber is widely used. For example, it can be used as a skeleton material for new tires to improve the overall performance of tires. The density of aramid fiber is small, which can reduce the quality of the tire, while increasing the contact area of the tire to the ground and improving the buffering performance. Its high modulus and low loss characteristics can reduce the rolling resistance of tires, reduce driving noise, and improve human comfort. In addition, the aramid fiber also gives the tire better cutting resistance, wear resistance, puncture resistance, improve the safety factor of the car at high speed.

The global Automotive Aramid Fiber market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
