The global Automotive Brake Corner Module market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

A brake corner module (BCM) is a compact, integrated system that combines the braking, suspension, and wheel-end functions of a vehicle into a single unit. It typically includes the brake caliper or drum, brake pads or shoes, rotor or drum, wheel hub, bearing, and suspension components such as the control arm and ball joint. By integrating these components into a single module, the BCM simplifies the assembly process, reduces the number of parts needed, and improves the overall performance and reliability of the braking system. BCMS are commonly used in modern automotive designs and are particularly useful in electric and hybrid vehicles where space is at a premium.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
