## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Unlike the brake lines, which are metal tubes that run the length of the car, the short brake hose found at each wheel is made of rubber. The hose's job is to carry brake fluid from a brake line fixed to the car's body the rest of the way to the brake caliper on the wheel. Its flexibility is what allows the wheel to move with the suspension.
