The noise, vibration, and harshness (NVH) design of any vehicle depends mainly on application and segment of the vehicle. The NVH reduction is intended for making the ride quality better for the occupants of the vehicle. The cabin refinement or insulation is the part of NVH design quality. The cabin can be made silent by close analysis of the NVH transfer paths. The transfer path and the engine capacity are the major design imbedded consideration for the cabin refinement. The components considered for the entry channels are engine bay, dash panel, floor, roof, doors, trunk bay, windshield, and structural members.
