An automotive camera is a camera specifically designed and used for automobiles. It is an electronic device that captures images or videos of the vehicle's surroundings and provides information to the driver or other vehicle systems. Automotive cameras are typically placed in various locations around the vehicle, such as the front, rear, or sides, to provide a comprehensive view of the surroundings.

A camera module, on the other hand, is a compact device that integrates the camera sensor, lens, and image processing functions into a single unit. In the context of automotive cameras, camera modules are the basic building blocks that are used to create the cameras that are installed in vehicles. A camera module typically consists of a lens, an image sensor, and an image processing chip that converts the raw data captured by the sensor into a usable image or video.

Global Automotive Camera key players include Panasonic, Veoneer, Magna, Sony and ZF TRW. Global top five manufacturers hold a share over 50%. In terms of product, Rear Camera Module is the largest segment, with a share about 32%. And in terms of application, the largest application is Passenger Car, followed by SUVs.
