Chassis is the skeletal frame of the vehicle which supports the components and sub-assemblies of the vehicle. The chassis is the key frame which provides rigidity and strength to the vehicle. Typically, carbon steel or aluminum alloy undergoes a variety of processes such as forging, stamping, and welding in order to obtain the frame structure. The Car manufacturer Ariel developed a titanium chassis for its Atom sports car that is 40% lighter than the steel chassis. The usage of titanium in chassis building leads to a reduction in weight and increase in fuel efficiency and titanium market is projected to expand particularly in motorsport vehicles.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In

2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
