The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Passenger safety is of utmost importance in any automobile vehicle. The safety requirement of the vehicle multiplies when a child is present. Although incorporation of safety air-bags are vital and are front line of defense in case of a crash or an accident, presence of occupant sensors can drastically improve the impact of the crash on the occupants, especially on children. Air-bags although lessen the impact from the crash as they can have a damaging impact on children and also resulting in death in some cases. This has made manufacturers to incorporate automotive child occupant sensors, to detect the presence of a child occupant in the vehicle and to reduce the deployment of airbags on impact. Due to the growing popularity of smart air-bags, electronic and automobile manufacturers are investing more on R&D to develop better occupant sensing technology to improve the safety characteristics related to air-bag deployment. Incorporation of weight recognizing sensors, position recognizing sensors to identify any children seated, especially in the front passenger seat, are some of the latest technologies that are gaining prominence among manufacturers.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the

global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
