The innovative dynamic system of data management is a software born to coordinate and make available to the Garage, the information of the whole Automotive supply chain. Based on the Software, the Automotive Data Management Market is segmented into Data Security, Data Integration, Data Migration, and Data Quality. In 2021, the data security segment dominated with around 25% of the automotive data management market share, owing to an increase in cyberattacks across the automotive market. Because connected vehicles are equipped with advanced sensor systems such as Bluetooth, lighting system ECU, remote keys, and others that record useful and confidential vehicle data, they are more vulnerable to hacks. According to a MMR report study around 85 % of intrusions in autonomous vehicles were observed in the year 2021. Due to the increased deployment of current technologies such as cloud computing and IoT in the automotive market, the data integration sub-segment led the market by over 30% in 2021 & is expected to grow at a steady rate between 2022 & 2028. Because of the growing need for connected autos, the data migration industry is predicted to grow at a CAGR of around 25% through 2028. Furthermore, by the end of the review period, the data quality segment is expected to have grown significantly, with a market share of roughly 20%. The growing demand for better data analytics solutions to optimize vehicle performance is expected to boost segmentation adoption.
