Automotive defogging glass, also known as defrosting or defogging glass, is a type of glass used in vehicle windows that can prevent fogging or icing on the glass surface.

Defogging glass, commonly known as defogging or defrosting glass, is a crucial component in vehicles that helps maintain visibility by removing condensation, frost, or fog from the glass surfaces. The automotive industry is continually advancing defogging technologies. Heated windshields and windows, utilizing conductive elements, are becoming more common, offering efficient defogging and defrosting. Increasing safety regulations are driving the adoption of defogging solutions. Clear visibility is essential for safe driving, and regulations are pushing automakers to invest in effective defogging systems. The rise of electric and autonomous vehicles has led to innovations in defogging systems. These vehicles require efficient defogging solutions due to their advanced technologies and unique requirements. The development of advanced materials, such as transparent conductive films, is influencing defogging solutions. These materials offer improved performance and durability. Emerging markets, especially in Asia, have shown significant growth in the automotive industry. This drives the demand for advanced defogging glass in these regions.
