The report requires updating with new data and is sent in 48 hours after order is placed.

The key to AI operation lies in storage instead of AI processor. 90% of the power consumption and delay of AI operation come from storage or data transfer. In 90% working conditions, the AI processor is waiting for the storage system to transfer data, and the time required by the computing system is almost negligible, so the performance of the storage system actually determines the real computing power. Wherein, the storage bandwidth can basically be equated to the performance of the storage system and the real computing power.

The global Automotive DRAM for Autonomous Driving market size is projected to grow from US\$ 2075 million in 2024 to US\$ 5826 million in 2030; it is expected to grow at a CAGR of 18.8% from 2024 to 2030.
