The global Automotive Electric Door Limiter market size is predicted to grow from US\$ 255 million in 2025 to US\$ 405 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

In 2025, global Automotive Electric Door Limiter production reached approximately 2769 K Units, with an average global market price of around 94 USD per Unit.

Automotive Electric Door Limiter is an electromechanical module used in automotive side doors to control door opening, closing, stopping, and position holding. Unlike a conventional mechanical door check, which only limits the door at several fixed positions, an automotive electric door limiter uses a motor, gearbox or screw mechanism, position sensor, controller, and vehicle communication interface to actively drive or assist the door movement. In practical vehicle applications, the system can support automatic door opening and closing, infinite door stop, multi-position holding, slope holding, soft opening and closing, anti-pinch protection, anti-collision protection, and linkage with soft-close locks, hidden door handles, smart keys, radar sensors, and door control units. It is mainly used in premium new energy vehicles, luxury sedans, high-end SUVs, MPVs, and smart cockpit models to improve comfort, convenience, safety, and vehicle access experience.

The Automotive Electric Door Limiter, with its unique features of electronically adjustable control, intelligent sensing, smooth and quiet operation, and safe collision protection, completely solves the pain points of traditional mechanical door limiters, such as fixed positions, uneven damping, easy wear and noise, and incompatibility with intelligent control. It can precisely control the door opening and hovering, improving driving convenience and comfort, and enhance vehicle safety through real-time status

perception and active protection, significantly raising the vehicle's premium feel and product competitiveness. With the continuous upgrading of automobiles towards electrification, intelligence, and premiumization, the demand for intelligent and comfortable features in mid-to-high-end passenger cars and new energy vehicles is growing rapidly. Consumers are constantly raising their requirements for driving experience, safety performance, and technological feel. Coupled with the expansion of the aftermarket and the acceleration of domestic substitution, the industry is gaining strong and sustainable development momentum.

The upstream core components of the Automotive Electric Door Limiter include drive motors, gearboxes, controllers, and sensors. Typical raw material suppliers include Johnson Electric, Nidec, Mabuchi Motor, Mitsuba, Bosch, Denso, Brose, and Valeo. Downstream applications are mainly in high-end new energy vehicles and luxury gasoline vehicles, with typical users including Mercedes-Benz, BMW, Audi, Tesla, and AITO, etc.

The annual production capacity of a single automated production line for Automotive Electric Door Limiters varies greatly depending on the degree of automation, product complexity, and production shifts. The industry's gross profit margin is typically in the range of 20%-30%.

United States market for Automotive Electric Door Limiter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
