High-tech electronic systems are a permanent fixture in cars nowadays and carry out a range of functions from regulating fuel to detecting problems. Anything between 30 to 80 separate electronic controllers – most of which are for safety – are fitted in cars these days. Such electronic components, which include adaptive cruise control and lane assist systems, constitute about 30% of the vehicles cost and in the years ahead that figure is slated to increase further. Other functions served by automotive electronic devices are advanced driving assistance, infotainment, and enhancing comfort.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the

global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
