According to this study, the global Automotive Electronics Manufacturing Services market size will reach US$ 77546 million by 2031.

Automotive electronics manufacturing services are integrated manufacturing services that focus on automotive electronic product design, assembly, testing and supply chain management, and mainly serve automobile OEMs and parts suppliers. With the development of intelligent networking, electrification and autonomous driving technologies, automobiles have greatly increased their reliance on electronic components such as electronic control units, battery management systems, on-board radars, cameras, and infotainment systems, which has driven the rapid growth of A-EMS. The service covers the entire process from PCB design, SMT patching, assembly packaging to functional testing and reliability verification. A-EMS suppliers must not only have precision manufacturing capabilities, but also provide highly flexible customized support and rapid response capabilities to meet the automotive industry's small-batch, multi-variety, and high-quality production needs.
