Vehicles create the energy while executing various functions. The energy generated by the vehicles can be used for providing additional power to the engine and other vehicle parts. The vehicle converts 25-30% of its fuel energy to move the vehicle, and the rest of the energy is wasted through the radiator and engine exhaust. To convert the heat extracted from hot exhaust gases into electrical power, exhaust energy recovery system is used.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their

peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
