Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022. In recent years, vehicles have been equipped with highly distributed control units. Each ECU has its functional requirements, and due to the electronics of the car, its respective hardware components (such as wiring, computing platforms, and sensors) have become more complex. Modern vehicles are composed of various control units to improve vehicle performance. Automotive electronic control units manage multiple actuators on internal combustion engines to keep the engine running properly. This is also known as an auto parts management system. It controls the oxygen content in the exhaust, engine speed and coolant temperature. Many automakers don't maximize the performance of their cars. The vehicle manufacturer limits the engine performance of the vehicle. The settings of the control unit can be easily adjusted according to the driving conditions or the owner's requirements to achieve smooth vehicle performance, improve fuel efficiency, and obtain more horsepower. Turbocharged engines allow for better engine performance. The remapping of these turbocharged vehicles can increase the power of the turbochargers, resulting in good performance. In addition to excellent performance, it can also improve the fuel economy of the vehicle. Remapping of the control unit helps to increase the mileage of the vehicle as it helps to achieve proper control of the fuel flow. This trend will help to grow the market over the forecast period.
