The global Automotive EVP Motor market size is predicted to grow from US$ 303 million in 2025 to US$ 433 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

The automotive EVP motor is a DC motor specifically designed to drive an automotive Electronic Vacuum Pump. Its core function is to drive the vacuum pump to generate stable negative pressure—thereby providing braking assistance to the traditional vacuum brake booster—in situations where the engine intake manifold cannot supply sufficient vacuum, the engine is shut off, or the vehicle is operating in hybrid or pure electric mode.

The upstream supply chain primarily includes enameled copper wire, electrical steel, permanent magnet materials, carbon brushes and commutators, bearings, shafts, steel housings, engineering plastics, terminals, and EMC components; brushless products additionally require NdFeB magnets, Hall sensors, PCBs, MCUs, MOSFETs, and drive controllers. Midstream EVP motor manufacturing involves stator and rotor stamping, winding, commutator/magnet installation, rotor dynamic balancing, bearing press-fitting, assembly of carbon brush systems or electronic commutation systems, EMC design, NVH optimization, and durability testing. Downstream, products are first supplied to assembly manufacturers and then reach OEMs through Tier 1 suppliers. Manufacturers typically see gross margins of approximately 20%–35%. Regionally, influenced by global vehicle production, the new energy vehicle sector, and the distribution of the automotive motor supply chain, the Asia-Pacific region is the largest market for both production and consumption; within this region, China represents a major growth market, while Japan and South Korea possess mature Tier 1 and motor supply ecosystems. The European market is driven largely by demand in Germany and across

Europe for hybrid and turbocharged models as well as traditional vacuum booster systems, while North American demand stems primarily from SUVs, pickup trucks, hybrid vehicles, and the aftermarket. The future of the EVP motor industry will be shaped by a dual-trend dynamic: in the short-to-medium term, the sector will see a shift from brushed motors to BLDC technology, stricter requirements for low noise and long service life, the coexistence of 12V and 12V/48V platforms, increased controller integration, and accelerated localization of the Chinese supply chain; however, in the long term, the market faces displacement by electronic power braking and "One-box"/brake-by-wire systems.

United States market for Automotive EVP Motor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Automotive EVP Motor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Automotive EVP Motor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Automotive EVP Motor players cover Nidec, Johnson Electric, B?hler Motor GmbH, Igarashi Motors (IMIL), Shenzhen Kinmore Motor, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
