The global Automotive Fault Diagnostic Scanner market size is predicted to grow from US\$ 37960 million in 2025 to US\$ 53580 million in 2031; it is expected to grow at a CAGR of 5.9% from 2025 to 2031.

The Automotive Fault Diagnostic Scanner can be plugged into the OBD port of almost any modern vehicle to obtain valuable information and real-time data about the vehicle's systems. The wireless scanner can connect to your phone via Bluetooth and let you access your car data through a mobile app.

The growing demand for advanced automation systems in modern vehicles has led to a surge in the electrification of automotive components. However, manually diagnosing these electronic components using various tools is time-consuming and expensive. To overcome this challenge, garage equipment manufacturers have developed a standard tool to diagnose vehicles by connecting a cable to the car's diagnostic connector. These scan tools consist of electronics and software to identify any faults in the vehicle. They can also be used to detect and analyze electronic system failures and reprogram control modules in different types of vehicles. The demand for automotive diagnostic scan tools is expected to grow owing to the increasing adoption of the OBD-II (On-Board Diagnostics II) standard by fleet owners. U.S. and European governments have made it mandatory for all vehicles to use OBD-II. The system allows telematics devices to record information about factors such as fuel usage, engine revolutions, fault codes and vehicle speed, which can be used to monitor the performance and usage of fleet vehicles. This information can be accessed through a software interface, enabling fleet operators to track key performance parameters such as fuel consumption, trip start and end times, and speed. Hence, increasing usage of on-board diagnostics in commercial fleets is expected to drive the growth of the automotive diagnostic scan tools market.

Rising demand for vehicles in developing countries, driven by urbanization, is expected to increase the demand for automotive diagnostic scan tools in the coming years. Customers are now more inclined to purchase vehicles equipped with OBD scanning solutions. The demand in these countries is expected to surge as users become more aware of such solutions. Vehicle architectures are becoming increasingly complex with the widespread adoption of technologies such as electronic control modules and advanced driver assistance systems. Troubleshooting such systems is technically challenging for the average end user. As a result, these scan tools, which offer standard trouble codes and other services, give consumers an easy interface to pinpoint what's wrong with their car and avoid costly workshop repairs for minor issues. Hence, the complexity of automotive electronics is likely to drive the growth of the market.
