Automotive FFC hot melt adhesive film is a special hot melt adhesive film used for the connection and packaging of automotive electronic equipment. FFC is the abbreviation of Flat Flexible Cable (flat flexible cable), also known as flat cable or flexible cable. It is composed of multiple insulated wires arranged in parallel, and has the characteristics of flexibility, thinness and lightness. Automotive FFC hot melt adhesive film plays the role of fixing, insulating and protecting in automotive electronic equipment. It is usually located at the bottom of the FFC connector. Through the characteristics of hot melt adhesive, a reliable bond can be formed between the connector and the circuit board,

ensuring the stability and reliability between the connector and the circuit board. Automotive FFC hot melt adhesive film has the following characteristics: 1. High temperature resistance: Automotive electronic equipment usually works in a high temperature environment, and the hot melt adhesive film needs to have good high temperature resistance to ensure that it can still maintain adhesion under high temperature conditions. 2. Anti-vibration and impact resistance: The car will be subject to vibration and impact during driving, and the hot-melt adhesive film needs to have good anti-vibration and impact resistance to ensure that the connector remains stable and reliable in the vibration and impact environment. 3. Chemical resistance: Automotive electronic equipment may be exposed to various chemicals, and the hot melt adhesive film needs to have good chemical resistance and not be corroded by chemicals. Automotive FFC hot melt adhesive films are widely used in the connection and packaging of automotive electronic equipment, such as car navigation systems, car entertainment systems, body control modules, etc. It provides a simple, reliable and economical solution for connecting and securing between connectors and circuit boards.
