Auto glass repair agent is a product used to repair minor damage to the surface of auto glass. These minor damages can be caused by gravel, sand or other debris and often appear as small pits, scratches or cracks on the surface of the glass. The function of the repair agent is to fill these damages, restore smoothness to the glass surface, reduce the spread of cracks, and improve the appearance and strength of the glass. Auto glass repair agent is usually a liquid whose main ingredients may include resin, solvent and hardener. To use, the repair agent is applied to the damaged area, then filled into the damage using a specific tool, and cured using UV light or other light sources. After curing, the repair agent will form a strong transparent film with the glass surface, repairing damage and improving the light transmittance and strength of the glass.
