Boost inductors have the advantages of small size, high temperature resistance, and low magnetic leakage, and are usually used in boost circuits. Automotive-grade boost inductors are currently mainly used in plug-in hybrid electric vehicles for driving boost scenarios. Since plug-in hybrid electric vehicles are equipped with fewer batteries than pure electric vehicles, high voltage output cannot be achieved directly. In order to reduce costs, meet performance requirements, and improve market competitiveness, some vehicle manufacturers use boost inductors and power switching devices to form a boost circuit, which realizes the function of increasing the on-board battery voltage to drive the high-voltage drive motor.

The global Automotive Grade Boost Inductor market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
