## Abstracts

The global Automotive Gray Iron Castings market size is predicted to grow from US\$ 2317 million in 2025 to US\$ 2940 million in 2031; it is expected to grow at a CAGR of 4.0% from 2025 to 2031.

Casting is a process in which a liquid metal is somehow delivered into a mold that contains a hollow cavity of the intended shape. The metal and mold are then cooled, and the metal part (the casting) is extracted. Casting is most often used for making complex shapes that would be difficult or uneconomical to make by other methods.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.

Automotive gray iron castings are a critical component in the automotive manufacturing industry, playing important roles in key areas such as engines, braking systems, and suspension systems. With the global automotive market moving towards greater environmental sustainability and energy efficiency, automotive gray iron castings are also subject to new market trends. Stringent environmental regulations and increasing

demands for reduced emissions and fuel efficiency are driving automotive manufacturers to seek lighter, higher-performance components while reducing their carbon footprint. Consequently, the market for automotive gray iron castings is gradually shifting towards more advanced materials and processes to meet these requirements. Furthermore, the rise of electric vehicles and autonomous driving technologies will have profound implications for the automotive gray iron castings market, as these emerging technologies demand higher precision and innovation, thereby altering the design and manufacturing requirements for castings. Therefore, automotive gray iron casting manufacturers need to stay in tune with market trends, innovate continuously, and adapt to the changing landscape of the automotive industry.
