An automotive grill mould is a precision-engineered tool used in the injection moulding process to manufacture automobile front grilles, which are structural and aesthetic components positioned at the front of vehicles. The grille allows airflow to engine components while contributing to vehicle brand identity and styling.

Grill moulds are typically made from high-grade tool steels (e.g., H13, P20, S136) and are designed to withstand high-pressure plastic injection and frequent cycles. These moulds must accommodate complex geometries, fine surface textures, integrated emblem placements, and multiple parting lines. Modern grille moulds may incorporate multi-cavity, hot runner systems, gas-assisted moulding, and textured or chrome-platable surfaces to support high-quality, high-volume production in OEM and Tier-1 supplier operations.

United States market for Automotive Grill Moulds is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
