Automotive ground projections refer to the use of lighting systems to project symbols, patterns, or information onto the ground around a vehicle. These projections can serve both functional and aesthetic purposes. Common applications include displaying logos, enhancing visibility by projecting pathway lighting, or providing safety-related warnings such as blind spot indicators or lane boundaries. Advanced systems integrate dynamic projections that respond to environmental conditions or user interactions, such as guiding passengers with illuminated paths or indicating a vehicle's autonomous mode. These innovations improve safety, usability, and branding, blending technology with design to enhance the driving and user experience.
