Gyrometers or gyroscopes are the integral part of any navigation or guidance system. Gyrometers are mostly used to calculate the orientation or inertial state of a vehicle or an aircraft. A gyrometer is a simple device which incorporates a wheel or a disc which is mounted in a way that it can freely rotate about an axis. This disc can change the axis itself in order to change its position according to predefined reference axis in the gyrometer. Increase in use of gyrometers in smartphones, vehicle navigation systems, and tunnel building equipment is likely to increase demand for automotive gyrometers and thereby propel the market
