The function of the headlight lens is to reflect the scattered light from the bulb into parallel beams, greatly enhancing the brightness by hundreds or even thousands of times. Ensure sufficient illumination within a range of 150-400M in front of the car. The transparent mirror refracts the flat light beam reflected by the reflective mirror; There are clear light and dark dividing lines. In practical use, the lens has strong focusing ability. As long as it is installed reasonably on the headlights, it can clearly illuminate the road surface, and the light can present a left low and right high effect. It is not in the high beam or low beam state, and the light will not diverge, but the lighting effect on the ground is very good, it will not cause glare and will not affect the normal driving of the opposite car. This type of lens is widely used in various front of the car for low beam and high beam.
