The global Automotive Heating Ventilation And Air Conditioning System market size is predicted to grow from US\$ 56120 million in 2025 to US\$ 78420 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

The Automotive Heating Ventilation And Air Conditioning System can be conceived of as a temperature control system with three subsystems: heating, ventilation, and air conditioning. The fundamental function of a heating, ventilation and air conditioning (HVAC) system in a car air conditioner is not only to add heat to or remove unwelcome heat from the passenger cabin, but also to clean and circulate air throughout the vehicle. The driver can either manually or automatically regulate how the HVAC system operates.

Sales to increase 5% globally this year, and 10% in the U.S., but at lower profitability as ICE volumes plateau then recede due to pent-up demand being fulfilled through 2024; Chinese brands to out-sell foreign brands in China for all of 2023 for the first time in decades, displaying an operating model that could win in Western markets; to compete, automakers must make customer-focused tradeoffs that favor technological features, speed to market, cost, and the higher risk that goes along with those pursuits
