The gross profit margin of major companies in the industry is between 22% ? 38%.

In 2025, the global production capacity of Automotive High Performance Brake Pads was approximately 272.59 million units.

Automotive High Performance Brake Pads are friction components designed for stable braking under high temperature, high load, or repeated braking conditions. They may use semi-metallic, ceramic, or sintered friction formulations to improve braking response, wear resistance, fade resistance, and durability in passenger cars, performance vehicles, and commercial vehicles.

The industrial chain includes upstream friction materials, metal powders, resins, backing plates, adhesives, shims, and packaging materials. Midstream covers mixing, pressing, sintering or curing, grinding, coating, testing, and assembly. Downstream applications mainly include OEM braking systems, aftermarket replacement, performance vehicles, commercial fleets, and repair channels.

The development of vehicle performance modification, commercial vehicle safety

upgrading and high-end passenger cars boosts the demand for automotive high performance brake pads. Products excel in high temperature resistance, stable braking performance and wear reduction to adapt to complex driving conditions. Material formula innovation and environmental-friendly production processes become key competitive highlights in the market.
