CAN is currently the most widely-used in-vehicle networking protocol. It's a bidirectional, multi-master, serial bus that uses UTP cabling to ensure reliability in electromagnetically noisy environments.

High-speed CAN networks are implemented with two wires and allow communication at transfer rates up to 1 Mbit/s. Other names for high-speed CAN include CAN C and ISO 11898-2. Typical high-speed CAN devices include antilock brake systems, engine control modules, and emissions systems. CAN with Flexible Data-Rate (CAN FD) is the next generation of high-speed CAN communication with evolving standards for higher data rates.

High-speed controller area network (CAN) transceiver is ideal for high-speed automotive network applications where high reliability and advanced power management are.
